Leadership Adaptable

Problem Solving

ACHIEVEMENTS

PROFILE

Full stack developer specialising in **scalable backend systems** with hands-on experience across payment integrations, REST APIs, mobile apps, and IoT. Proven in building end-to-end products used by real users — from police deployment platforms to travel booking engines.

PROJECTS

Offline Transaction System

In Progress

Backend Focus

Java / PHP

MySQL

REST API

Offline Sync

Architecting a backend system enabling financial transactions without internet connectivity, with intelligent sync and conflict resolution on reconnect.

- › Offline-first data storage with local queue management
- › Conflict resolution and idempotent transaction processing
- › Secure sync engine with data integrity validation on reconnect
- › Role-based access and encrypted transaction logs

E-Bandobast — Gujarat Police App

SSIP Hackathon 2024

Android / Java

Google Maps API

XML

Push Notifications

Centralized mobile platform for police deployment, coordination, and live monitoring during public events and VIP visits across Gujarat.

- › Role-based login (Admin, Inspector, Constable)
- › Zone-wise duty assignment and live Google Maps deployment view
- › Real-time push notifications for alerts and updates

- Improved GTU's website UI with dedicated result-view functionality.
- Intern of the Month — Nexis Infotech, Bharuch.
- 2nd place — ILLUMINATI 2025 cultural fest, ITM BU.

LANGUAGES

English Hindi Gujarati

TechnoLab Club Website

April 2026

Technical Member Web Development Club Website

Official website for the TechnoLab Club at ITM(sls) Baroda University, built as a Technical Member of the club and currently live in production.

- › Full club website — events, members, and activities
- › [Live Site](#) ↗ · [GitHub](#) ↗

Satellite Data Analysis Platform

March 2026

Python Rasterio NumPy Matplotlib Remote Sensing

Processes multi-band satellite imagery to extract environmental insights using NDVI and NDWI indices for vegetation health and water resource monitoring.

- › NDVI & NDWI index calculation from raw satellite bands
- › Vegetation health and water body analysis from geospatial data
- › Supports sustainable development and environmental monitoring
- › [GitHub](#) ↗

Visaease Travel Website

May 2025

React JS Node JS MySQL Razorpay Nodemailer

Full-stack travel booking platform with RESTful APIs, admin panel, and payment integration handling packages, bookings, and user management.

- › RESTful APIs for auth, services, and bookings
- › Cart system, auto pricing, and Razorpay payment gateway
- › Secure email via Nodemailer, user dashboard, admin panel

Airline Reservation System

April 2025

PHP MySQL Bootstrap Razorpay

Dynamic flight booking platform with session-based auth, flight search, ticket booking, and payment gateway.

- › Flight search by origin/destination/date, passenger booking, Razorpay

Pharmacy Management System

March 2025

Laravel MySQL Razorpay

Web-based system for managing medicines, inventory, billing, and customer records with role-based access control.

- › Admin/Staff roles, cart system, Razorpay integration

IoT Plant Watering System

March 2024

Arduino / C++ DHT11 Soil Moisture Sensor MQTT

Smart IoT system monitoring soil moisture, temperature, and humidity — auto-activating water pump below threshold with remote MQTT dashboard.

- › Real-time temp/humidity monitoring and automatic pump control
- › Remote monitoring via IoT Cloud / MQTT Dashboard with alerts
